Flag Day

June 14

Father's Day is Sunday, June 21

Father's Day 2026 is Sunday, June 21!

Coincidentally, all of Father's Day weekend falls under our "Best Days for Fishing" or a Great Day for Golf.

Father's Day did not become a permanent national holiday for many years. The first bill was introduced in Congress in 1913, but in spite of

encouragement by President Woodrow Wilson, it did not pass.

In 1966, Lyndon Johnson issued a proclamation designating the third Sunday in June to honor fathers.

Finally, in **1972**, President Richard Nixon signed a law declaring that Father's Day be celebrated annually on the third Sunday in June. It has been an official, permanent national holiday ever since.

Before You Hit the Road This Summer

Check Your Tires

Change Oil and Oil Filter

Tips for Driving in Rain

Did you know it **only takes 1/12th an inch of rain and 35 mph to hydroplane?** The roads are more dangerous when rain comes after a dry spell. (Rain slicks the road with accumulated oil and dirt).

Even though most of the oil washes off after one day's rain, wet roads are dangerous—rainy weather or not. Limited visibility can add to the danger. Drive smart. Follow these four driving tips for driving in rain.

1. Turn your headlights on

Day or night, **keep your headlights on** while driving in rain. In many states, laws require headlights during rain or whenever visibility is less than 1000 feet. That is about a quarter of a mile or three and one-third football fields.

2. Newer tires, awesome breaks and wipers

- Threadbare tires are dangerous, anything 2/32 tread depth or less. Keep your traction at top performance. Maintain relatively new tires with deep tread. Or, get some all-weather tires. This should help prevent hydroplaning.

- Get regular brake checks.

Keep your windshield wiper blades ready for rainy days,—before the rain comes, this will help visibility.

What to do if you hydroplane?

- Ease off the accelerator and continue driving steadily forward.

Do not slam on the breaks.

3. Don't use cruise control

Rainy weather demands full attention. Keep your eyes on the road, your hands on the wheel, and your feet ready for action.

It is recommended NOT to use cruise control when it's raining. If you hydroplane, cruise control can cause you to lose control. And, if you do hydroplane, the lack of traction may cause the cruise control to accelerate.

4. Drive smarter

It's best to adjust driving strategy around changing conditions. Weather is one of those things. Driving in rain or any inclement weather be careful and pull back:

- **Keep your distance.** You never know when the person ahead of you will spin out.

- **Do not tailgate**—especially in limited visibility.

- **Slow down.** Take corners slower and in heavy traffic.

Be patient. Expect extra traffic.

We warranty parts and labor for
24 Months/24,000 Miles

A LABRADOR'S GUIDE

HOW TO WALK A HUMAN

A Dogs Guide

Humans need exercise. If they don't get it they become "chubby". It's up to you to so save them.

1. Allow your human to tether themselves to you. This keeps them from wandering off or running away.
2. Your human probably needs breaks. Be considerate and stop and sniff often.
3. Bark frequently. Humans have a short attention span.
4. When you go to the bathroom, walk away. If you have trained your human correctly, they will pick it up. Good aerobics.
5. Periodically drag your human as fast as you can. This is called interval training.
6. Do not allow your human to shorten the walk. They are being lazy. Sit in protest if you must.
7. Once you are home, allow your human to remove their tether, then lick their face many times. This is positive reinforcement for a job well done.

Finally, The Gift Every Dad Can Use!

For The Dad Who Has Everything!

Give Dad the gift of FREE Car Maintenance with an Insider's Car Care Club Membership

Membership Has Free Services and Discounts Worth \$300-\$400.00!

Warning, High Heat Warning for this Summer:

Special Report!

Why many are incurring very expensive repairs as a result of high gas prices and how to avoid them.

This is information that other shops WON'T tell you...

Due to the major increase in gas prices many people are not filling their tanks as much as they used to, in many cases **letting their fuel level get very low**. They are doing this for several reasons; one reason is they are waiting as long as they can after a big increase to see if the price will go back down a few cents as it often does. Another reason is just plain and simple **how much it cost!** This is especially prevalent with teen drivers.

Whatever the reason, the very **expensive consequence** is the same. When you operate your vehicle on a regular basis with the fuel level **below a ¼ tank** you take the risk of causing **damage to your fuel pump**, in many cases causing it to **fail**, this is especially in the summertime as

TEMPERATURES RISE!

Surprising information for most people...

Most vehicles today have fuel pumps located inside the tank, one very important aspect to that, believe it or not, it is intended for the **fuel in the tank to help keep the pump cool during operation**.

When the fuel level gets to a low point and the fuel is not cooling it, the **pump overheats** and over time this will **cause it to fail**. In the past, we would often see this in cars driven by teens because many don't have enough money to keep the fuel level up in their cars.

We see a jump in **fuel pump failures** when the price of **gas goes higher**. Replacing many fuel pumps is **very expensive**. It is not uncommon to see prices that are in the **\$500-\$1500** range and higher on some models.

URGENT INFORMATION

You can avoid paying that hefty sum of money!

Although we will gladly take care of this repair should you need it, we would like to **help you avoid this expensive repair**. There are many repairs on your vehicle you cannot avoid; this is one **you can do something about**. All you really need to do is **maintain ¼ tank of fuel or more** in your vehicle to make sure there is enough to keep the pump cool, **resist the temptation** to wait out a price increase and you will **save a lot more in the long run**.

Because **you are one of our valued clients**, we want to help you avoid this potential pitfall.

If you have **any questions**, please give us a call at **724-222-3077**.
